a second accelerator electrode including a conductive cylindrical element smaller in diameter than the neck, which is connected to an external potential via an isolated high voltage stem pin, and

a focus electrode connected to a focus potential through a low voltage stem pin; and

a second lens comprising:

the focus electrode, and

- a final accelerator electrode comprising a continuous internal conductive coating on the neck and the funnel, wherein the final accelerator electrode is connected to anode potential through an anode button in the neck.
- 20. (New) The einzel focusing lens of claim 13 wherein the external potential is an anode potential.
- 21. (New) The einzel focusing lens of claim 14 wherein the anode potential is less than or equal to twelve kilovolts.
